ENTRY

Tap App Icon

1. Open the app and confirm you have connected to Receiver(RX) Wi-Fi.
2. On the device, the RX Wi-Fi name appearing should have "Gp" as its first two letters.
3. If the connection is incorrect , a dialog box will appear.

return to Home Page

Start

Tap to Main Page

Display TX Codes and Colors

- If not updated within 10 minutes → Flashing
- Press and hold on the screen for 1 second → copy coordinates (can be pasted to the Google Maps navigation)
- In case of distress → A red star appears with a warning sound.
- When the distress is terminated → a green star appears.
- The code is limited to 3 characters for a concise display

RX:
latitude,
Longitude
ID,
Battery level,
Temperature

Show Rx Move Direction

- If RX Speed is less than 1 m/s, RX is presumed to be static.
- The sector front of the alert area on the collision alarm will also be automatically deactivated.

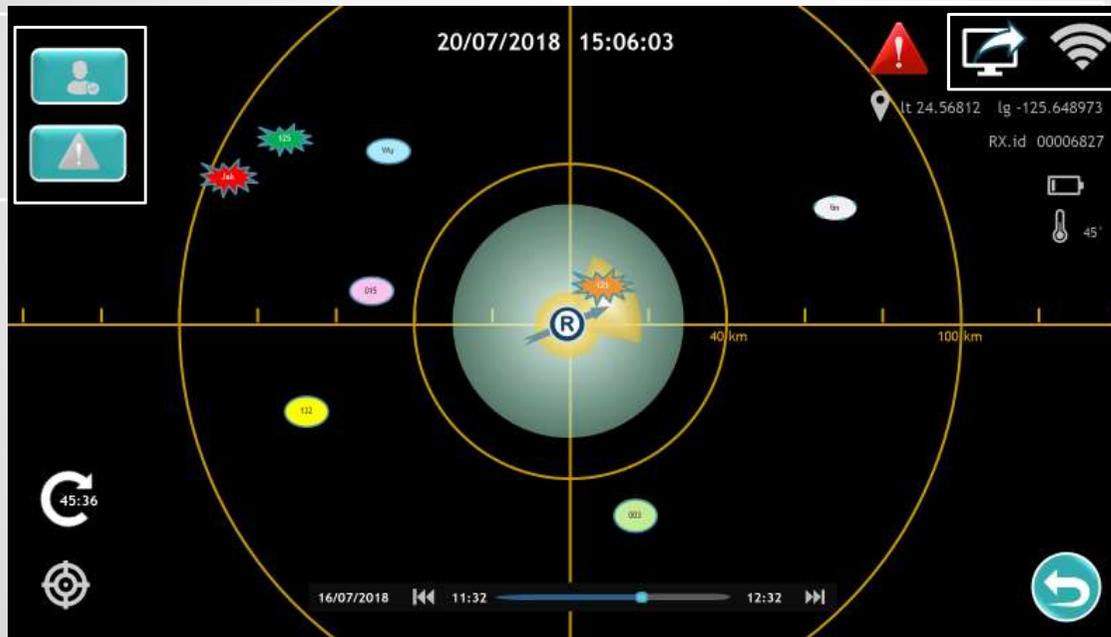

Start

Tap to Main Page

If any TX location exceeds the screen range, you can click the rectangular icon to show their IDs.

Click to open the Wi-Fi connection dialogue box.

- Select Members
- Set Alerts

SELECT MEMBERS

Transmitters = Bystander + **Members**

Transmitters、
Bystander、
Members

Member

- The receiver can receive all data sent by transmitters in a large area, including bystanders.
- In order to avoid a messy display, the user can select only the transmitters that need to be displayed, namely, the members.
- However, the app can also receive information regarding bystanders, but without displaying this information on the main screen. An alert will still be triggered if a bystander sends a distress.
- Members are saved in the App. When re-opening the App, members are preset, whilst ignoring bystanders.

1. Only members present will be displayed on the main page, thus excluding absent members and bystanders.
2. Members present and absent members are saved on the App. Users need not select members again when re-opening the App.
3. If members are moved to be bystanders, they are no longer preset as members.
4. Exceptions whereby bystanders will be displayed:
 - 1) Distress status
 - 2) Distress terminated announcement status
 - 3) Bystander appeared in the alert zone after the alert was activated.

SET ALERTS

GPT = **Danger Precaution** + Long Range Tracking

Impact Alert

Any person in the yellow zone will be shown as an orange star. This alert setting can be used to

- (1) prevent collisions between persons and vessels
- (2) send signal when rescue team is near the person in distress.

Distress Alert

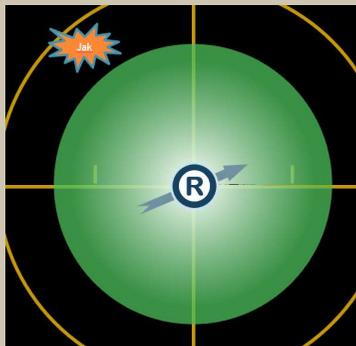

Any person who sends a distress signal will be shown as a red star.

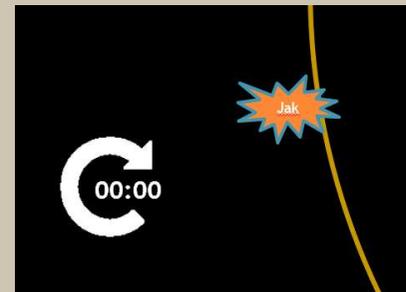

When the distress signal is terminated, it will be displayed as a green star for up to 1 hour to announce the termination of distress status.

Out of Range alerts

Any member appearing outside the safe zone will trigger an alert.

Loss of Signal alert

Any member

1. whose signal has not been received for a continuous 10 minutes period, and
2. the set alert countdown clock reached to its end will be displayed at their last known coordinate as an orange star.
